

The EASTERN Advantages

Many finger joint boards on the market use wood that is shipped from South America or China and chemically treated to resist rot. We don't understand why. Consider the advantages of EASTERN finger joint boards made with Eastern White Pine from right here in the U.S.:

- ▶ Eastern White Pine is naturally resistant to decay, so no chemical treatment is needed.
- ▶ Eastern White Pine has a proven history of performance that dates back to the early days of our nation's history. It is not unusual to find the original Eastern White Pine clapboards and trim boards on homes that are over 200 years old!
- ▶ Eastern White Pine is lightweight, durable and easy to use.
- ▶ EASTERN is manufactured completely under one roof in Cobleskill, NY for maximum quality control and production efficiencies.
- ▶ EASTERN reduces shipping and the carbon emissions that accompany it by using locally grown and harvested wood and manufacturing everything under one roof. We also minimize waste and specify environmentally friendly adhesives and primers.

A Product of Mill Services, Inc.
Cobleskill, New York

Manufactured in Upstate New York

EASTERN is a product of Mill Services, Inc. in Cobleskill, NY. Mill Services is the largest producer of Eastern White Pine finger joint boards in the northeastern United States, with the capacity to manufacture up to 750,000 board feet per month and deliver to customers all over the U.S.

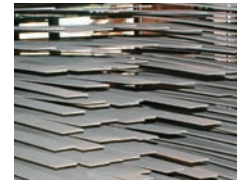

EASTERN finger joint boards are manufactured completely under one roof using state-of-the-art equipment. By chopping, milling, finger jointing and priming in the same facility, Mill Services can double check for quality throughout the entire manufacturing process, control production schedules and slash transportation costs.

For more information about Mill Services, visit www.millservicesinc.com

Finish Options

EASTERN finger joint boards are finished with high quality, environmentally friendly primers from FMI. All finishes are applied in a factory controlled environment to ensure a beautifully smooth, even finish on all four sides. Choose from one, two or three coats of EASTERN latex, EASTERN oil or EASTERN Premier, a luxurious latex over oil finish that is tops in the market.

Any EASTERN primed finger joint product may be top coated using any 100% premium brand acrylic paint. For best results, a top coat should be applied within six months of product installation.

Delivery Specifications

- All units are paper wrapped for superior protection
- Mixed grain
- Moisture content - kiln dried 10 - 12% typical

Warranty

EASTERN boards are backed up with a 15 year warranty against cracking, blistering or peeling when installation conditions have been met. For details, please visit www.millservicesinc.com/eastern-warranty.html
